---on this colour printer some of the text labels in Figure 1.1 come out grey and blurred, while others are perfectly sharp --- a few are visibly distorted (shrunk down in height).

A previous attempt (in 2-up mode) resulted in only the top-half being printed (IIRC, this was when I still ran 10.2, same printer). I cannot recall how I finally printed it, probably through Acrobat., The result now almost looks like a anti-aliased screen-dump.

Printing page 1-100ish (my original print job), A4 paper scaled to , letter: fuzzy pages from page 37 (physical 41) on., (a) - Page 37 only (scaled): fuzzy., - Page 37 only (A4 cropped to letter): fuzzy.,

All were printed from my PowerBook G4/550; 512MB/30GB; MacOS X 10.3.2; , latest available drivers for Color LaserJet 4600 and Epson 2000P, , built-in system driver for LaserJet 4050. I also verified that Acrobat , 6 prints correctly on the 4050, but I didn't try the other printers. , Let me know if there's any other details I can provide.,

I only printed pages 31, 35 and 39 (referring to the pages on the printout -- that translates into 35, 39 and 43 in the file). The first two are perfectly alright; the last is blurred, and -- what is more -- it took noticeably longer to emerge from the printer.
